

## Weekly Maintenance Wave Runner

Assemble supplies:

1. Solvent for bilges
2. Simple Green, Soft Scrub for exhaust soot
3. Rags for cleaning
4. Air tank & blow gun, new full tank
5. WD-40
6. Grease, White Lithium
7. Grease Gun

**Step One:** Incline ski so it drains out the back, degrease:

Using solvent, start inside the bow and work towards the stern. Wipe under seat, and stern seat. Remove soot from exhaust area.

**Step Two:** Rinse with fresh water the areas that got degreased plus the areas listed in step three:

**Step Three:** Air dry with compressed air; Starting from bow working to the stern.

Pay close attention to:

- Bow inside; 1. Wire plug-ins.  
2. Steering joint

- Bow outside; 1. Instrument panel  
2. Throttle cable  
3. Choke cable  
4. Buttons, start, stop, and clip  
5. Fuel petcock

- Engine compartment; 1. Spark plugs  
2. Black box  
3. Throttle, choke cable  
4. Oil pump

- Stern compartment; 1. Battery, muffler, all hose clamps

- Jet exhaust; 1. Steering joint

**Step Four:** Lube with WD-40

Coat all of the above with WD-40 or product of choice.

**Step Five:** Add two squirts of grease to the intermediate housing bearing, see owners manual.

**Step Six :** Reassemble and write in Log: List in the appropriate log for each ski, including time, date, and name of person conducting maintenance.
